

The goal of our program is to provide a nurturing environment that facilitates and promotes each individual child's physical, cognitive, and social-emotional growth. We believe that children learn best through meaningful, hands-on experiences. We will provide the materials and learning activities that encourage the children to develop and use their emerging skills. Each child enters school with a unique style and varying capabilities. We consider each child's strengths and encourage him/her to use and extend these skills. We create a warm and safe environment where children can grow happily and become life-long learners. Children are naturally curious and have an innate passion for mastery and competence. In our kindergarten classroom, we value the individual success of each child and celebrate everything they have to offer!

### **Kindergarten Learning Themes:**

- \*Butterflies and life cycles
  - \*Harvest and seeds
